Submitted by:

Jennie Ron S. Ablog
John Arjude C. Gerona
John Christian E. Sun

In partial fulfillment of academic requirements
for the course
CS 191 Software Engineering I
of the
1st Semester, AY 2016-2017

Unique Reference:

The documents are stored in the GitHub Repository Link: github.com/johnjudeandjennie/SARAPP-sa-UP.

Document Purpose:

To provide the use case specification for the users of the SARAPP sa UP System.

Target Audience:

This document serves as a partial fulfillment of academic requirements for the CS 191 Software Engineering course, handled by Ma'am Rowena Solamo, to whom this document is made for.

Revision Control

History Revision:

Revision Date	***Person Responsible***	***Version Number***	***Modification***
09/29/16	John Christian E. Sun	1.0	Initial Document; Added diagram.
09/29/16	John Arjude C. Gerona	2.0	Added scenarios and the description for each scenario.
09/30/16	Jennie Ron S. Ablog	3.0	Added the use case name and description; uploaded the pdf to the repository.

Use-Case Name: 1.0 The users search for a store.

Description: The SARAPP sa UP system allow the user to search for a store according to location, or name. Several scenarios may arise while performing this action. All of which are described in the table below.

Preconditions: NONE

Flow of Events:

Scenario Name	***Description***
Scenario 1 User input his/her location.	1. User inputs his/her current location to the application. 2. Application displays the food places that are nearby the inputted location.
Scenario 2 User searches for a specific store to rate.	1. User enters the food store's name. 2. Application searches for the store's profile. 3. User inputs his/her ratings. 4. Application stores ratings into database.
Scenario 3 User searches for a store that does not exist in database.	1. User enters the food store's name. 2. Application detects that store does not exist within database. 3. Application displays an error message that tells the user that the store does not exist.
